**SHOP: Exergen TemporalScanner**

The Exergen TemporalScanner thermometer measures your body temperature by capturing the heat from your skin over your temporal artery across your forehead. That artery is easier to see on some folks than others, but the directions are in the box. Makers say the digital readouts are more accurate than conventional thermometers. Find it at discount stores and pharmacies for about \$50. Visit [www.temporalscanner.com](http://www.temporalscanner.com).
