THE PERFECT STOCKING STUFFER FOR NEW MOMS

This Gentle, Battery-Operated Thermometer Will Be Used for Years to Come

Mothers of young children on your Holiday gift list will love the **TemporalScanner™** from **Exergen**. The world's first temporal artery thermometer, it uses space-age technology to gently yet accurately read even a sleeping child's temperature with a gentle slide across the her forehead.

No more waking baby for a temperature reading. No more struggling or inserting an ear probe into a child who may be suffering from an uncomfortable infection. Gentle as a healing hand against a child's face, the Exergen TemporalScanner gauges body temperature in two seconds by capturing the naturally emitted heat from skin over the temporal artery, which runs across the forehead and is directly connected to the heart via the carotid artery. The Exergen TemporalScanner infrared thermometer has a manufacturer's suggested retail price of \$49.99. It is available at Wal-Mart, Walgreens, Costco, Babies R Us, Toys R Us and Sam's Clubs nationwide.

The Exergen TemporalScanner™: Patented technology reads a temperature in just two seconds.

A KINDER, GENTLER AND *MORE EXACT* THERMOMETER...add one

“Research proves that this is amongst the most accurate way to test for fever in all ages and it is clearly the least invasive,” says Exergen President Francesco Pompei, Ph.D., who developed and patented the technology. “We are proud to have developed it and stand behind each one we sell.”

The affordable Exergen TemporalScanner infrared thermometer is tested six times for accuracy during manufacture at Exergen’s plant outside of Boston and comes with a one year warranty. Tests show it is accurate to within $+0.2^{\circ}\text{F}$ —a much more accurate reading than taking the temperature any other way including oral, rectal, axillary (under the arm) and tympanic (in the ear). It’s also easy to use: Simply depress and hold its soft rubber-coated button and lightly scan across the forehead. A red LED light and soft beep indicate a correct scan. Ergonomically designed of injected molded plastic, the home unit features a high-contrast LCD temperature display, runs on one 9-volt battery (included), and meets and exceeds all regulatory requirements, including FDA, ASTM and UL.

The only thermometer manufactured in the United States, the Exergen Temporal Scanner is also better for the environment, using infrared sensor technology so it contains no mercury (like traditional glass bulb thermometers). The Exergen TemporalScanner also never needs any additional purchases, unlike tympanic thermometers, which necessitate clean plastic probe covers with each new use. It has a manufacturer’s suggested retail price of less than \$50. For additional information, visit www.temporalscanner.com.

Exergen Corporation is an internationally respected innovator and leading manufacturer of an extensive line of patented infrared thermometers, scanners, sensors and controls used in a wide variety of industrial and medical applications for professional and consumer use. Founded by Francesco Pompei, Ph.D. over two decades ago in Boston, MA, the company continues to lead the way in its field by providing lower cost, highly reliable results and less invasive methods than with any other thermometry techniques.
